***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121.

I. Claims 2-5, 7-15, 43-51, 55-69, and 87-92, drawn to an operation that enables a telecommunication network having the user equipment unit upon receiving the access group eligibility message compares the stored access group classification with contents of the access group eligibility message to **determine whether the user equipment unit is allowed access to the cell for which the access group eligibility message is transmitted** (455/519).

II. Claims 17, 19, 52, 53, 70 and 72, drawn to an operation that enables a telecommunications network having the user equipment unit determines, by comparing contents of the version field associated with the access group classification and the version field associated with the access group classification carried by the subsequent core network message, whether **the user equipment unit should update its stored access group classification** (455/456.3, 518 (update access group classification based on the location)).

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are distinct from each other because of the following reasons: Invention I deals with the operation enables a telecommunication network having the user equipment unit upon receiving the access group eligibility message compares the stored access group classification with contents of the access

group eligibility message to **determine whether the user equipment unit is allowed access to the cell for which the access group eligibility message is transmitted** (455/519); Invention II deals with the operation an operation that enables a telecommunications network having the user equipment unit determines, by comparing contents of the version field associated with the access group classification and the version field associated with the access group classification carried by the subsequent core network message, whether **the user equipment unit should update its stored access group classification** (455/456.3, 518 (update access group classification based on the location)).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different modes or operation, different functions, or different effects, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Ant amendment of inventorship must be accompanied by request, under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
